## SciVerse Applications Beta

SciVerse Applications Beta lets you integrate search and discovery applications into SciVerse, to help you be more productive in your research. Login or register, find an application and get started - there is nothing to download or install, the applications you've selected will appear immediately within SciVerse.

Developers can create applications for over 15 million SciVerse users worldwide. SciVerse Applications Beta lets you integrate your application directly into the core SciVerse user experience on article, record and search results pages. To learn more, please visit the [Developer Network](#).

SciVerse Applications Beta has just launched and we continue to make improvements. We welcome your feedback on all aspects of this service.

### Overview

The quantiFind application is designed to empower the scientific researcher to uncover new insights from the ScienceDirect corpus. Our technology efficiently extracts all data related to a query and discovers which metrics are most relevant for visualizing that data. This application is designed for information retrieval when the user needs to understand landscapes, clusters and trends indicated by thousands of data points, rather than to simply locate an individual paper. In addition, the quantiFind application allows the user to perform numeric queries such as retrieving snippets that discuss solar cells operating within a range of short-circuit current densities or that investigate specific chemotherapy dosages. The researcher can also immediately recognize in the results where there is white space in the corpus, potentially indicative of R&D opportunities.
